

Top 10 Reasons to Choose DBConnect to Handle Oracle Database Management

1 > DBConnect's Oracle database managed services ensure that your Oracle database is backed up, tuned, and properly maintained.

2 > Unlike other Oracle service providers, you have access to Oracle DBAs who are dedicated to the support of JDE. Our team of subject-matter experts leverage a set of Best Practices to proactively identify and prevent issues before they impact your system.

3 > Only service provider in the world that provides an automated solution specifically engineered to manage databases used by JDE.

4 > Your systems are automatically monitored 24/7.

5 > We leverage the power of the Oracle database to uncover opportunities within the JDE data stored in the database. For example, our NightOwl™ JDE Data Sniffer allows us to monitor for the presence of just about any condition in your business data and notify you when that condition arises.

6 > We can monitor your JDE job queues and alert you when they get backlogged, or we can alert you when key JDE month-end batch processes take too long to run.

7 > Our NightOwl™ JDE Database Security for Oracle JDE closes the security gap introduced when all JDE Oracles tables get granted to PUBLIC during installation or table generation. NightOwl™ closes this gap and ensures that it remains closed.

8 > You only pay for the services you need, when you need them. You have access to the world's premier subject-matter experts for less cost than a single Oracle DBA.

9 > We provide our customers a support portal to submit and track work requests.

10 > You may want to maintain routine database management in-house. We can provide database assessments on a project basis and also perform the remediation needed to bring your system in line with our Best Practice.
